

# PATIENT CLINICAL RECORDS

## Patient Demographics:

Name: John Doe  
DOB: 01/15/1965  
MRN: 123456  
Gender: Male  
Phone: (555) 123-4567

Primary Diagnosis: G70.0 - Myasthenia Gravis

### Chief Complaint:

Patient presents with progressive muscle weakness, ptosis, and diplopia.  
Symptoms worsen with activity and improve with rest.

### History of Present Illness:

58-year-old male with a 2-year history of myasthenia gravis.  
Currently on pyridostigmine 60mg q6h with partial symptom control.  
Recent increase in bulbar symptoms prompting consideration for IVIG therapy.

### Past Medical History:

- Myasthenia Gravis (diagnosed 2021)
- Hypertension
- Type 2 Diabetes Mellitus

### Current Medications:

- Pyridostigmine 60mg PO q6h
- Prednisone 10mg PO daily
- Lisinopril 10mg PO daily
- Metformin 1000mg PO BID

### Laboratory Results:

- AChR Antibodies: Positive (15.2 nmol/L)
- CK: 145 U/L (normal)
- TSH: 2.1 mIU/L (normal)
- HgbA1c: 6.8%

### Physical Examination:

- BP: 138/82 mmHg
- HR: 72 bpm
- Neurological: Bilateral ptosis, fatigable weakness in proximal muscles
- Ice pack test: Positive

### Assessment and Plan:

Patient is a candidate for IVIG therapy given inadequate response to

oral immunosuppression. Plan to initiate Privigen 2g/kg over 2-5 days.  
Will monitor for adverse reactions and assess response after treatment.
